**Manual Part 2
Safety Advice**

Attention!

In some countries you may need a permit when you want to set up a marquee or tent of a certain size – normally larger than 50 m². It is your responsibility to comply with local rules and regulations and to ensure that the marquee/tent is assembled correctly according to the enclosed manual. It is very important that you assemble all parts according to the instructions and fasten the marquee with the enclosed ground pegs or similar equipment. Do not skip any parts or any steps.

Weather conditions and Safety Packs

Never set up a marquee/party tent in bad weather or when it is windy. Check the weather forecast before you start setting up the tent – and for the days the tent will be erected. In case of bad weather conditions, it is your responsibility to ensure that the marquee/tent is safely secured or taken down so the structure cannot cause damage to persons, buildings, and more.

Use storm straps and ground pegs – our Safety Packs - to secure the structure – even if the weather forecast promises calm weather. Do not use open fire, welding equipment or other sources, which can ignite, inside or close to the tent. Never stay inside the marquee/tent during extreme weather conditions!

Marquees are temporary structures

All our marquees and party tents are temporary structures intended for parties and other events and are only meant for temporary use. In short, they are made for being used a few days at a time only before being disassembled.

Number of guests inside a marquee/party tent

In our shop we have written the number of guests you can have inside each of our marquees and party tents. There will be two numbers for each tent – one for standing guests and one for seated guests. Do not exceed these recommendations or you will put your guests in danger in case of a fire or another dangerous situation. As a rule of thumb, you can have 1 standing guest per 0,75 m² and 1 seated guest per 1 m². Remember to make room for a buffet and make room between the tables so everybody can get out quickly in case of emergency. Be sure that all doors are clear at all time!

Insurance

Make sure to check whether your marquee/tent is covered by your home contents insurance or similar.

Attention to snow and rain

In the event of snow always be sure to remove snow from the roof of the structure regularly to prevent snow from building on the roof as heavy snow can cause the marquee/tent to collapse.

In the event of rain, there is a risk of water assembling on top of the marquee/tent. Heavy puddles of water may cause the marquee/tent to collapse. It is your responsibility to ensure that water do not assemble on top of the tent by keeping the cover taught at all times and remove water if it assembles anyway. Make sure that the cover is stretched out properly over the frame all the time.

Condensation inside your marquee

You may experience condensation inside your marquee/party tent. Temperature changes and moisture in the air can cause dew or condensation to appear outside and inside a marquee and a party tent. This is normal and does not mean the marquee is leaking.

Do not unpack or repack your marquee/tent in temperatures below zero as it may cause the cover material to break or get damaged. If you have to work with the marquee/tent in sub-zero degrees, you must pack the tent indoor. You also have to make sure that the marquee is completely dry before folding it together or you may risk that mildew will develop while the tent is in storage.

Warranty information

Dancover warranty applies only to the normal use of the product, normal wear and tear excepted, in accordance with written use instructions or manual. The warranty does not apply to damage caused by accident, abuse, misuse, or modification of the product. If you need to clean your marquee/party tent cover at some point, only use a mild detergent and lukewarm or cold water. Do not use strong agents of any kind.
